

INFORMATION

Copyright, Fair Use, Public Domain

Not everything found on the Internet is free to use. Fair Use Doctrine has certain rules students must follow to be legal, ethical, and responsible users of information.

Citing ownership of photos & reverse image search

Giving credit to the owner of original works is important. But, what if an image has been used by multiple users on multiple websites? How do students know who owns it?

Locating Reliable Sources / Fact-checking

Anyone can create a website. How do students know if information they are reading or viewing is reliable and unbiased?

Research vs. Searching

If students are using Google to find all of their information then they should know how to effectively search Google. Using phrase searches, Boolean indicators, and site qualifiers will help students receive less than 1,000 quality results.

INFOhio

This portal features numerous databases and websites that are free for all Ohio students. This is the place to start for research BEFORE searching Google.

Primary vs. Secondary Sources

Students will learn the difference and know where to locate sources online.

ALL ABOUT

Library Orientation

Northland's library is a small example of libraries in the "real world". All students should know how to navigate a library.

Different types of libraries

Special, academic, public, school, and personal libraries.

Book Talks (one-week advance notice)

Brief summaries about some of Ms. Trimble's favorites! Also book talks about specific themes (art, environmental science, inventions, award-winners, etc.)

Book speed "dating" dating (one-week advance notice)

Students sit in a circle and have 2-minutes to read the first few pages of a book. Once the two minutes are up, they pass the book to their neighbor and start reading the one passed to them. As they read, they mark their likability level of the book on a provided list. This list can be used by students throughout the year when visiting the library.

Book Read-alouds

Ms. Trimble will read novels, picture books, poetry, nonfiction, textbooks, etc.

MEDIA

Gender Stereotypes

Students will learn how advertisers use music, words, and color to appeal to specific genders.

Target Marketing, Product Placement, the world of "likes"

This generation is inundated with advertising because they are the future "consumers". The sooner they are "hooked" on a product, the better. Students will learn about the strategies and techniques used to manipulate their purchasing decisions.

Design Features

The study of logos and how color influences perception.

Media Elements

Words (headlines), camera angles, music, color and lighting are used to create a mood or reaction.

DIGITAL

Cyberbullying / Online Harassment

When do comments go to far? How much contact is too much?

Online Predators

How to keep safe in the digital world.

Phishing, pharming, whaling, etc.

Knowing the difference and how to protect your phone and computer from corruption.

Google Suite / Applied Digital Skills (numerous lessons)

Students learn how to use Google Suite to support their academic needs. Each lesson in Applied Digital Skills ends with a project.

MAKERSPACE

In 2014, Ms. Trimble created one of the first library makerspaces in Franklin County and has been making ever since! In 2019, she managed a Fab Lab at a local high school and was named the COSI STEM Star and Grand Marshal for 2020. She is always willing to collaborate with any teacher in every subject area interested in project-based learning ideas to help reinforce student learning. Check out the makerspace activities on the library website.

EDUCATIONAL

As an adjunct at Otterbein, Ms. Trimble taught future educators about the following technologies. Stop by the library and schedule a time to learn more!
